Edited and with an introduction by Anthony Hyman; From *Computing Reviews*: “Charles Babbage was a nineteenth-century polymath who initially studied math-

ematics at Cambridge and subsequently pursued interests in fields as diverse as philosophy, political economy, and mechanical computing. While attempting to realize a machine for calculating and printing error-free mathematical tables, he visited factories to learn metalworking techniques, invented a system of mechanical notation to represent the states of the machine, and devised a method for correct typesetting. As the editor of this series notes, the scope of Babbage's work makes him a difficult subject to understand in our modern age of specialized scholarship.”
