Nelson H. F. Beebe. Java programming: Fun with Fibonacci. World-Wide Web document., March 2004. URL https://www.math.utah.edu/~beebe/software/java/fibonacci/index.html. This report summarizes the origin of the Fibonacci sequence, giving the full Latin text from the original book written in 1202 (not previously available on the Web). Computation of the Fibonacci sequence, and its term ratios, is implemented in at least 45 different programming languages. The report comments on the relative difficulty of the task in some of those languages, and on their suitability for numerical computation. It also provides a complete floating-point formatted output package for Java.

Report, University of Utah, Department of Mathematics, Salt Lake City, UT 84112-0090, USA, September 14, 2019. 53 pp. This document supplements a book chapter on computer arithmetic, and is updated occasionally; the edition of 4 November 2019 has 69 pages. It is part of a set of handouts for workshops on computer arithmetic that I have given several times, and is supplemented by applications discussed in [1570].

[Beebe:2020:CAP] Nelson H. F. Beebe. Computer arithmetic — perils, pitfalls, and practices. Report, University of Utah, Department of Mathematics, Salt Lake City, UT 84112-0090, USA, January 31, 2020. 35 pp. Production of the book in which this chapter was to appear has been delayed, and the book is not yet in print. The original version appears in [1157]. This chapter is included in a set of handouts for a workshop on floating-point arithmetic, and is supplemented by applications in [1529]. The Texinfo markup system chosen by the book authors is severely limited in capabilities so that both online text and published PDF files can be produced; thus, the document design is inflexible, and use of color and alternate fonts is impossible.

[1622] Nelson H. F. Beebe. Design of a fixed-point arithmetic library. Report, University of Utah, Department of Mathematics, Salt Lake City, UT 84112-0090, USA, September 2020. vii + 106 pp. This document is still under development. It describes the design of, and algorithms in, a large portable mathematical software library (already more than 38 000 lines of code) that the author developed in Fall 2020/Winter 2021, and that will eventually be released under an open-source license for free public access. A formal journal article in ACM Transactions on Mathematical Software is contemplated, although it can only be a supplement to this long document.
