[Cre65] Robert J. Creasy. General description of the research time-sharing system with special emphasis on the control program. Memorandum 1, IBM Cambridge SR&D Center Research Time-Sharing Computer, Cambridge, MA, USA, January 29, 1965. ???? pp. This appears to be the earliest work on virtual machines that is cited in the IBM VM history [Var91]. That history reports on page 28: “Creasy and Comeau spent the last week of 1964 [36] joyfully brainstorming the design of CP-40, a new kind of operating system, a system that would provide not only virtual memory, but also virtual machines. [37] They had seen that the cleanest way to protect users from one another (and to preserve compatibility as the new

System/360 design evolved) was to use the System/360 Principles of Operations manual to describe the user's interface to the Control Program. Each user would have a complete System/360 virtual machine (at first called a 'pseudo-machine')." Footnote 28 on page 28 says: "For the first few weeks, the CSC people referred to their concept as a 'pseudo-machine', but soon adopted the term 'virtual machine' after hearing Dave Sayre at IBM Research use it to describe a system he had built for a modified 7044.".

Technical report, Office of Computing and Information Technology, Princeton University, Princeton, NJ 08544, USA, April 1991. 168 pp. URL http://www.leeandmelindavarian.com/Melinda/neuvm.pdf. Original presented at Australasian SHARE/GUIDE in Melbourne, Victoria, Australia in 1989. This is a detailed history of the development of virtual machine technology on IBM System/360 and later mainframes, and of the opposition by much of IBM to that technology until it was demonstrated that their performance could equal, or even exceed, that of an operating system running on bare hardware, and also allow a single physical host to support multiple operating systems, and software development, simultaneously. There are also several comments about the development of the REXX language, and about the influence of Unix on IBM's software development.
